HIGH ALTITUDE TIPS

Crested Butte and the Gunnison Valley are between 7,000 and 10,000 feet above sea level. The following tips will help you to adjust to this environment.

1. **Increase your water intake before you arrive in Crested Butte** – Dehydration can occur over several days and it is best to prevent it by starting to drink water early.
2. **Drink a lot of water and electrolyte drinks once you arrive** – A very small amount of fluid loss in the body can significantly affect your ability to perform.
3. **Protect your skin and eyes** – At high elevation, it is very important to wear sunscreen and eye protection. It will be necessary to reapply sunscreen several times during the day even when it is cloudy.
4. **Be prepared for weather and dress in layers** – Temperatures can drop rapidly. It is best to dress in warm layers and be prepared for any conditions.

**ASC has limited items to borrow, so please let us know if you need any listed item.*
